In the Science room Term 2

Year One:

This term the unit of work is *Schoolyard Safari*. Students will explore small animals leading to a better understanding of how their adaptations help them survive in their habitats. Through investigations, students learn how animals move, feed and protect themselves.

We will be looking at worms, snails and ants in more depth during the term, if the students are able to bring in bugs to investigate it will help them learn more about these creatures. It is important to ensure that the students use the code of caring for these creatures and provide a place of shelter and food if possible.
In the Science room Term 2

Year Two:

This term the unit of work is **Water works**. Students will have the opportunity to develop an understanding of, and appreciation for the precious natural resource, water. Through investigations, students explore how water is used, where water comes from and how to use it responsibly.
